HEMANT
Team Member

He is pursuing Mathematics honours from Deen Dayal Upadhyaya College, Delhi University. He is very creative and helps the team with the content, data and provides his unique ideas to always remain out of the box.

Problem Statement

Increasing cases of stress, depression, anxiety, suicides, unhealthy lifestyle, and lack of accessible mental health support.

SUB PROBLEMS:-

- Increasing cases of **suicides** due to stress and depression.
- Increase in cases of **rages** among people.
- **Other health problems** due to stress and anxiety.
- Increase in **criminal cases**.
- Low income due to **bad lifestyle** leading to low economy.
- Bad **children parenting** .

Solution

- An **AI driven mobile application named HEALME** that can be downloadable in any device across the world having the features to solve the problems of people suffering from mental illness .
- It involves mental health specialists, doctors and consultants over video conferences that can be selected by patient based on the reviews/ratings given by earlier patients.
- It involves the **AI voice assistant** that would act as the constant friend and motivator .
- It involves games, musics, books to motivate patients and making them feel relaxed.

Services

Doctors/Consultants

Any person in need of consultancy can book a live session based on the reviews given to consultants by early users.

Music

It involves music to relax the mind and tunes for meditation

Games

The app involves games that helps in the brain exercise. Patients can also find diet routine or yoga videos in app

Connect with friends

The app contains features to connect with people with same problems or other problems to share each other's lifestyle.

Voice assistant

Our app will have a virtual assistant which will play the role of personal motivator friend to everyone according to their problems.(Using Artificial Intelligence)

Motivational Books

The app will also features motivational books like autobiographies of successful people and facts related to psychology and other motivating journeys.

Target Market (1/3)

Since our app involves all necessary features in one platform , our target market is very huge.

India is a diverse country with a large population and the groups that would be benefit from our app are:

- **Young Adults** : According to a survey by the National Institute of Mental Health and Neurosciences , the prevalence of mental health disorders is highest among young adults in India as well as this group is more e-techy.
- **Women** : Mental Health issues are often stigmatized in India , and women may face additional barriers to seeking help due to cultural norms and gender roles. The app would be a valuable resource for them.
- **Healthcare professionals**: The mental health specialists in India do not have enough resources to address increasing demand for the services. This app could definitely provide resources to them and track their patients as well.

Target Market (2/3)

- **Students:** The academic pressure and stress of students in India are known to be high. Our app offers mental health support to students may help them to manage their stress and improve their academic performance.
- **Rural Population :** Access to mental health services is often limited in rural areas in India .The app can provide remote access to the users.

The above data is just about India while talking about world , the following data is more shocking :

- There are about **1 Billion people with mental illness** worldwide .
- Surprisingly **1.1 Million** people die by **suicide** annually worldwide.
- The world is witnessing about **56% rise in teen suicides**.

Target Market (3/3)

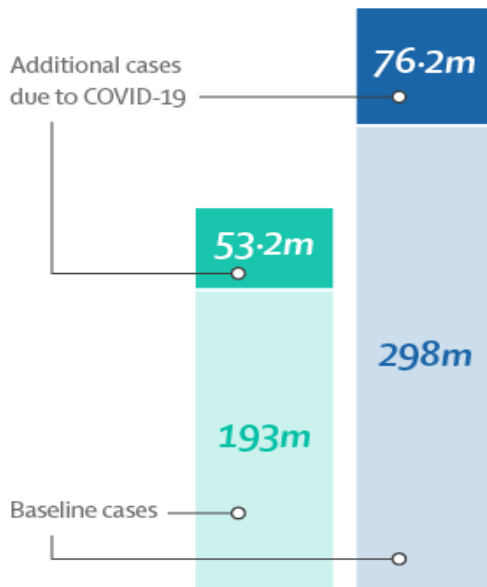

The COVID-19 pandemic has had a large and uneven impact on global mental health

Cases of mental disorders rose sharply during the pandemic

Cases in 2020

Major depressive disorder

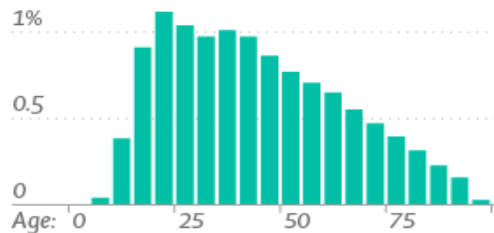

Anxiety disorders

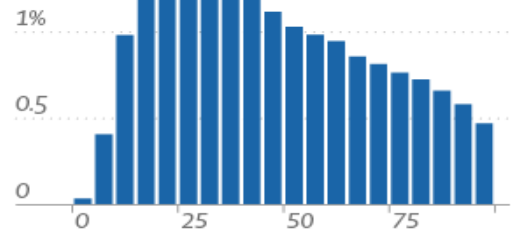

Younger people were hardest hit

Additional prevalence due to COVID-19, by age

Major depressive disorder

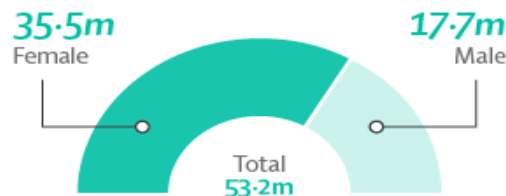

Anxiety disorders

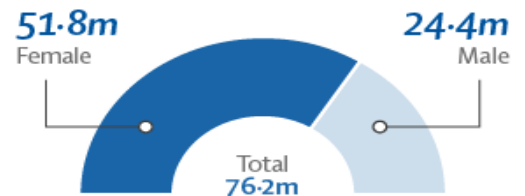

Increases were higher among females than males

Additional cases due to COVID-19, by gender

Major depressive disorder

Anxiety disorders

Revenue Model

- Premium tunes and books.

Packages

Users that are advised to do yoga or exercises are given an option to get train by our owned limited yoga instructors (salary based) for specified packages.

Running Costs

- Storage Cost of data of users .
- App maintenance cost.
- Salaries to Yoga instructors.
- Collecting music ,tunes and books from the different libraries.
- Collaboration cost with top mental health specialist and hospitals.

Unique Selling Proposition

1

There is not any mental health app which involves virtual assistant using Artificial intelligence playing the role of friend and motivator which patients need the most .It also includes tracking feature of health for self monitoring.

2

There are very rare apps which are dedicated only to mental health .The current apps are not that organized as they need to be since people with unstable mental health need the basic and simple app features .

Competition Analysis

- o There are very rare apps which are dedicated only to mental health .The current apps are not that organized as they need to be since people with unstable mental health need the basic and simple app features .
- o The available apps are not popular and patients are unaware about them due to lack of collaborations with highly qualified mental health doctors.

Competitors

Clarity

No AI Voice assistant available.

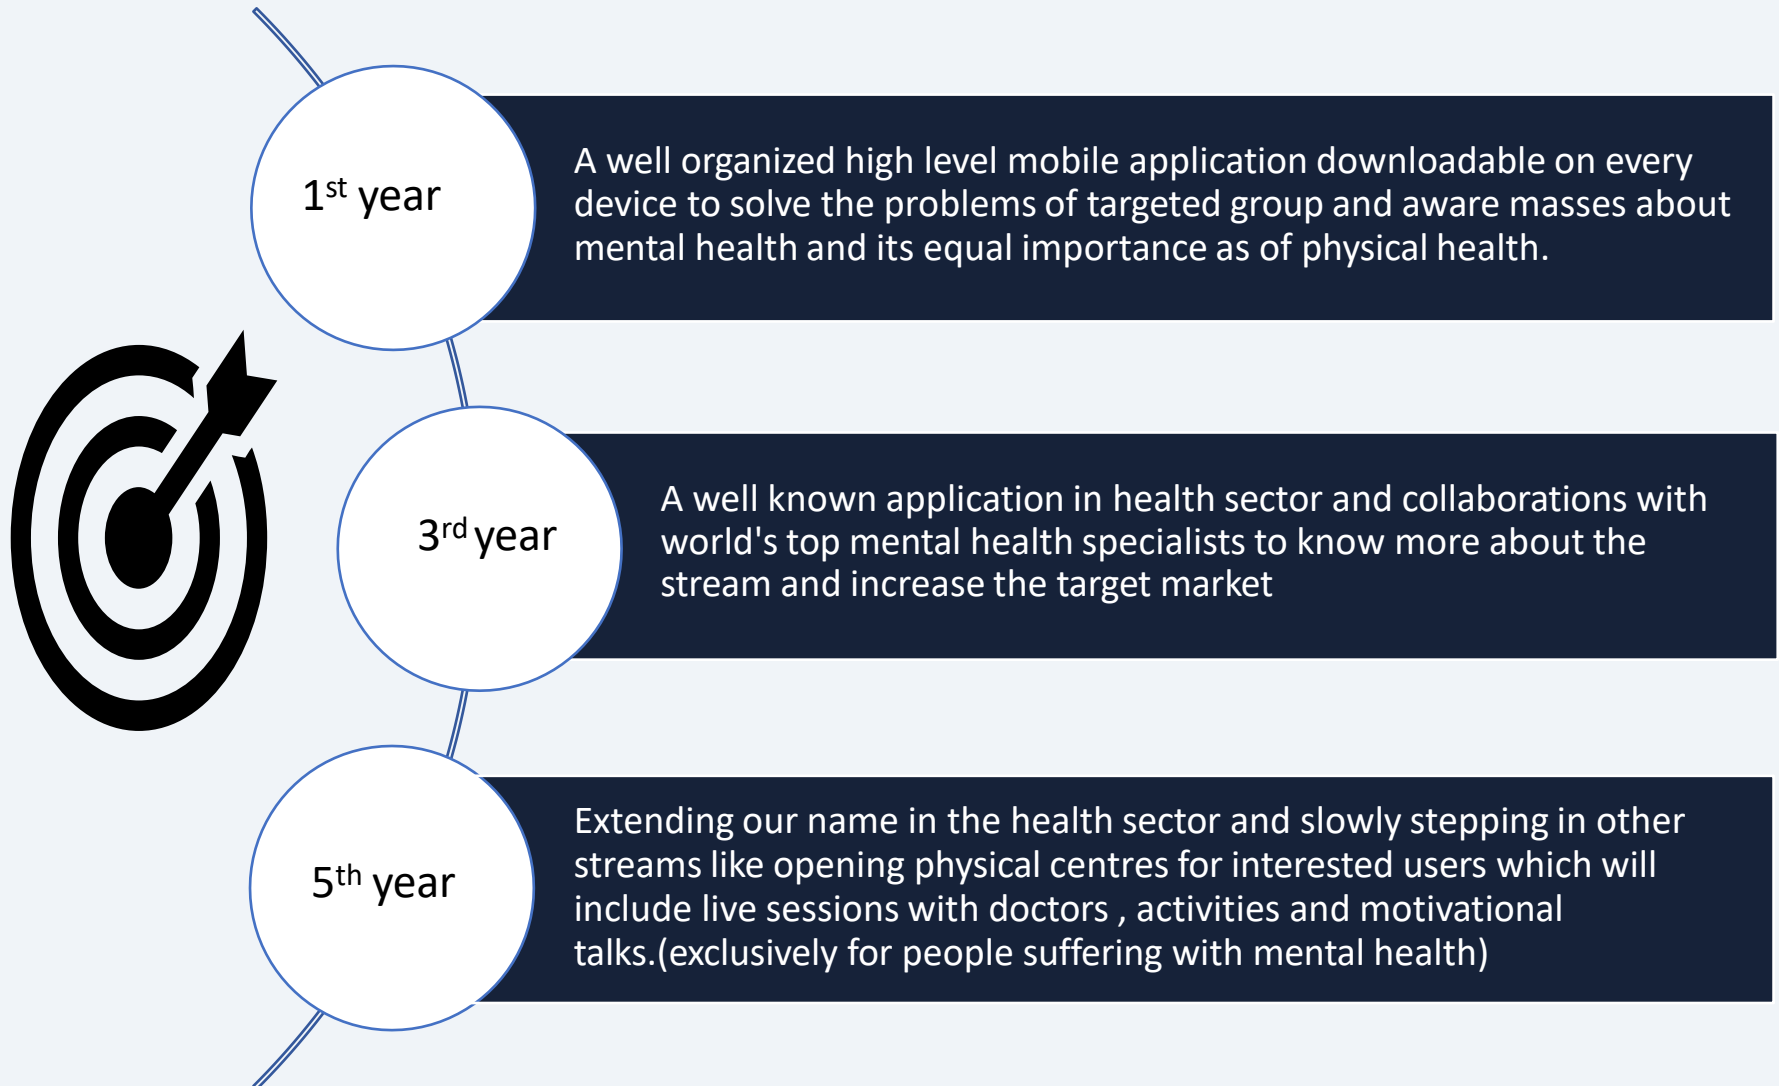

Wysa

No advertisement and awareness among patients.

Intellact

No motivational books, songs and fun games are included in any of the above apps.

Milestones

THANK YOU
